Define the Problem Statements

Date	25 June 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	2 Marks

Customer Problem Statement Template:

I am a Researcher, Policy Maker, Student, or Government Organization Representative trying to evaluate a country's human development level accurately and efficiently, but analyzing multiple socio-economic indicators manually is time-consuming and complex because life expectancy, education, and Gross National Income (GNI) per capita must all be considered together. This makes it difficult to quickly understand a country's development status and identify areas that require improvement.

I am	Describe customer with 3-4 key characteristics - who are they?	Describe the customer and their attributes here
I'm trying to	List their outcome or "job" the care about - what are they trying to achieve?	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way - what bothers them most?	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists - what needs to be solved?	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Describe the emotions the result from experiencing the problems or barriers

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Researcher	Analyze the Human Development Index (HDI) of different countries	Calculating HDI manually is time-consuming and involves multiple socio-economic indicators	Health, education, and income data must be collected, cleaned, and analyzed before determining the HDI score	Delayed in conducting research and comparing countries effectively
PS-2	A Policy Maker	Identify countries that require development improvements	It is difficult to quickly assess development levels using raw statistical data	Multiple indicators such as life expectancy, education, and GNI per capita must be evaluated together	Less confident in making informed policy decisions
PS-3	A Student / Data Analyst	Learn how machine learning predicts HDI scores	Understanding relationships among development indicators is challenging	Large datasets require preprocessing, visualization, and predictive modeling	Confused about applying data science techniques to real-world problems
PS-4	A Government Organization	Monitor and compare national development performance	Manual analysis of development indicators is slow and resource-intensive	Development reports require extensive statistical analysis and comparison	Concerned about delays in planning effective development programs
