

Ideation Phase

Empathize & Discover

Date	25 June 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	4 Marks

Empathy Map Canvas:

For the Empathy Map Canvas of your Smart Lender – Loan Eligibility Prediction System, choose the primary user as Credit Officer (recommended) because your project mainly helps banks evaluate loan applications. The empathy map should contain the following content. The template sections are Think & Feel, Hear, See, Say & Do, Pain, Gain.

User Persona - Credit Officer

Example:

EMPATHY MAP CANVAS

Human Development Index (HDI) Predictor

PRIMARY USER PERSONA: POLICY MAKER / RESEARCHER

THINK & FEEL

- Wants accurate and reliable HDI predictions.
- Needs trustworthy data for policy planning.
- Concerned about improving citizens' quality of life.
- Wants quick insights into country development.
- Believes AI can support better decision-making.
- Seeks an easy-to-use prediction system.
- Interested in comparing development across countries.
- Wants transparent and explainable predictions.

WHO IS THE PERSON?

Age: 30 – 55 Years
Profession: Policy Maker /
Researcher / Data Analyst

Goals:

- Predict HDI accurately
- Identify development gaps
- Improve public welfare
- Support data-driven decisions

Responsibilities:

- Analyze development indicators
- Compare countries
- Recommend policies
- Prepare reports for stakeholders

SEE

- Country-wise HDI reports.
- Life expectancy statistics.
- Education performance reports.
- GNI per capita data.
- Development dashboards and visualizations.
- Government policy documents.
- Large datasets requiring analysis.
- Increasing adoption of AI in governance.

HEAR

- Government discussions on policies.
- Researchers presenting HDI reports.
- International organizations (UNDP, World Bank) promoting development.
- Citizens requesting better services.
- Economists discussing GNI and living standards.
- News about global HDI rankings.
- Experts recommending AI-driven policy analysis.

SAY & DO

- Analyze development data.
- Compare HDI scores across countries.
- Study healthcare, education, and income indicators.
- Generate reports for government agencies.
- Use statistical tools and ML models.
- Recommend improvements in public policy.
- Monitor progress toward SDGs.
- Present findings to stakeholders.

PAIN

- Manual HDI calculation is slow and time-consuming.
- Difficult to analyze multiple socio-economic indicators together.
- Large datasets require extensive preprocessing.
- Limited tools for quick prediction and comparison.
- Risk of inaccurate manual analysis.
- Delayed decision-making due to slow data processing.
- Difficulty identifying countries needing immediate intervention.
- Complex statistical methods require technical expertise.

GAIN

- Fast and accurate HDI prediction.
- Automated machine learning-based analysis.
- Better policy planning and resource allocation.
- Easy comparison of countries.
- Data-driven decision support.
- Interactive Flask web application.
- Reduced manual effort and analysis time.
- Improved research productivity.
- Reliable classification into Very High, High, Medium, and Low HDI categories.
- Better understanding of development trends and opportunities.
